

Qt (*cute*)

### Quick history:

**Haavard Nord** and **Eirik Chambe-Eng** of Trolltech began development of "Qt" in **1991**. In 2000, Qt 2.2 was released under the GPL v2, On 28 January 2008 Nokia announced to acquire Trolltech, On 14 January 2009 Qt version 4.5 was relicensed, adding LGPL as licensing option. In **August 2012 Digia** announced to acquire all rights to Qt and take Nokia's role within the Qt Project.

### Officially supported Language of development:

C++, Python (Officially maintained).

Ring, Go, Rust, PHP, and Java (Unofficial).

More bindings: [https://wiki.qt.io/Language\\_Bindings](https://wiki.qt.io/Language_Bindings)

### Native Widgets :

Qt use the native style APIs of the different platforms, on platforms that have a native widget set, to query metrics and draw most controls and widgets.

### Maintenance of the library:

Last release: 5.15.1 (10 September 2020)

### Documentation:

<https://doc.qt.io/>

### License:

Qt Commercial License, GPL 2.0, 3.0, LGPL 3.0

### Example Applications developed:

VLC

CryEngine

VirtualBox

Scribus

Auto desk MAYA
